

## English

## Deutsch

## A. DEVICE DESCRIPTION

The Arthrex Corkscrew®, PushLock®, and SwiveLock® suture anchors consist of anchors with an integral or separate eyelet. The PushLock® Tenodesis anchor is a two-piece push-in anchor with either a forged or closed eyelet. They are pre-loaded on a handled inserter. Suture, with or without needles, and a suture threader may also be provided.

The Arthrex Implant System, Tenodesis Screw Eyelet is a kit comprised of attachable eyelets, FiberTape® suture and a suture threading device. This Implant System is used in conjunction with Arthrex Tenodesis Screws and a Tenodesis driver for use as a SwiveLock (Tenodesis) suture anchor.

## B. INDICATIONS

The Arthrex Corkscrew, PushLock, and SwiveLock suture anchors are intended to be used for suture (soft tissue) fixation to bone in the foot, ankle, knee, hand, wrist, elbow, shoulder, and hip (devices with FiberWire® only). Acetabular labral repair (**except** DX SwiveLock SL, 2.4 mm and 2.5 mm PushLock, Nano, Micro and Mini Corkscrew FT suture anchors). The Arthrex PushLock Tenodesis anchor is intended to provide soft tissue reattachment (i.e. fixation of ligament and tendon graft tissue) in surgeries of the shoulder, elbow, knee, foot/ankle, and hand/wrist.

Surgeons must apply their professional judgment when determining the appropriate suture anchor size based on the specific indication, preferred surgical technique, and patient history.

**Shoulder:** Rotator cuff Repair, Bankart Repair, SLAP Lesion Repair, Biceps Tenodesis, Acromio-Clavicular Separation Repair, Deltoid Repair, Capsular Shift or Capsulolabral Reconstruction.

**Foot/Ankle:** Lateral Stabilization, Medial Stabilization, Achilles Tendon Repair; Hallux Valgus Reconstruction, Mid-foot Reconstruction, Metatarsal Ligament Repair, Metatarsal Tendon Repair (**except** PushLock Tenodesis anchor) and Bunionectomy (**except** PushLock Tenodesis anchor, 2.4 mm and 2.5 mm PushLocks, DX SwiveLock SL, Nano, Micro and Mini Corkscrew FT suture anchors). **DX SwiveLock SL, Nano, Micro and Mini Corkscrew FT suture anchor only:** Digital tendon transfers. **PushLock Tenodesis anchor only:** Flexor Hallucis Longus for Achilles Tendon reconstruction, tendon transfers in the foot and ankle.

**Knee:** Anterior Cruciate Ligament Repair (**except** PushLock, Swivelock, DX SwiveLock, DX SwiveLock SL, Nano, Micro and Mini Corkscrew FT suture anchors), Medial Collateral Ligament Repair, Lateral Collateral Ligament Repair, Patellar Tendon Repair, Posterior Oblique Ligament Repair and Iliotibial Band Tenodesis.

**Hand/Wrist:** Scapholunate Ligament Reconstruction, Ulnar or Radial Collateral Ligament Reconstruction, 2.5 mm PushLock, DX SwiveLock SL, Nano, Micro and Mini Corkscrew suture anchors only; Repair/Reconstruction of Collateral Ligaments, Carpal Ligament Reconstruction, Repair of Flexor and Extensor Tendons at the PIP, DIP and MCP joints for all digits, and Digital Tendon Transfers. **PushLock Tenodesis anchor, DX SwiveLock SL, Nano, Micro and Mini Corkscrew FT suture anchors only:** Carpometacarpal Joint Arthroplasty (Basal Thumb Joint Arthroplasty). **PushLock Tenodesis anchor only:** Carpal Ligament Reconstructions and repairs, tendon transfer in the hand/wrist.

**Elbow:** Biceps Tendon Reattachment, Ulnar or Radial Collateral Ligament Reconstruction, Lateral Epicondylitis repair (**except** PushLock Tenodesis anchor, 2.4 mm and 2.5 mm PushLocks, DX SwiveLock SL, Nano, Micro and Mini Corkscrew FT suture anchors).

**Hip (devices with FiberWire only):** Acetabular labral repair (**except** PushLock Tenodesis anchor, DX SwiveLock SL, Nano, Micro and Mini Corkscrew FT suture anchors).

The 2.4 mm Hip PushLock suture anchor is indicated for acetabular labral repair **ONLY**.

**Citeus Medius (U.S. Only):** 4.75 – 5.5 mm PEEK and Titanium SwiveLock suture anchors and 5.5 – 6.5 mm PEEK and Titanium Corkscrew suture anchors.

## C. CONTRAINDICATIONS

1. Insufficient quantity or quality of bone.  
2. Blood supply limitations and previous infections, which may retard healing.

3. Foreign body sensitivity. Where material sensitivity is suspected, appropriate tests should be made and sensitivity ruled out prior to implantation.

4. **Bioabsorbable only:** Foreign Body Reactions. See Adverse Effects-Allergic Type Reactions.

5. Any active infection or blood supply limitations.

6. Conditions that tend to limit the patient's ability or willingness to restrict activities or follow directions during the healing period.

7. The use of this device may not be suitable for patients with insufficient or immature bone. The physician should carefully assess bone quality before performing orthopedic surgery on patients who are skeletally immature. The use of this medical device and the placement of hardware or implants must not bridge, disturb or disrupt the growth plate.

8. Do not use for surgeries other than those indicated.

## D. ADVERSE EFFECTS

1. Infections, both deep and superficial.  
2. Foreign body reactions.

3. **Bioabsorbable only:** Allergic-like reactions to PLA materials (PLLA, PLDLA) have been reported. These reactions have sometimes necessitated the removal of the implant. Patient sensitivity to device materials must be considered prior to implantation.

4. **Titanium only:** Shoulder dislocation/subluxation.

## E. WARNINGS

1. An internal fixation device must never be reused.  
2. Do not re-use this device.

3. **Titanium only:** All metallic implant devices used for this surgical procedure should have the same metallurgical composition.

4. **Bioabsorbable only:** Attempting implantation into hard, dense bone and/or drilling/punching smaller diameter holes than recommended may cause failure (breakage) of the implant during insertion.

5. **Bioabsorbable Corkscrew suture anchor only:** The Arthrex 6.5 mm anchor should be used in soft bone only.

6. Postoperatively and until healing is complete, fixation provided by this device should be considered as temporary and may not withstand weight bearing or other unsupported stress. The fixation provided by this device should be protected. The postoperative regimen prescribed by the physician should be strictly followed to avoid adverse stresses applied to the device.

7. Pre-operative and operating procedures, including knowledge of surgical techniques and proper selection and placement of the device, are important considerations in the successful utilization of this device. The appropriate Arthrex delivery system is required for proper implantation of the device.

8. Any decision to remove the device should take into consideration the potential risk to the patient of a second surgical procedure. Device removal should be followed by adequate postoperative management. Or, contact your Arthrex representative for an onsite demonstration.

**I. INFORMATION**  
Surgeons are advised to review the product specific surgical technique prior to performing any surgery. Arthrex provides detailed surgical techniques in print, video, and electronic formats. The Arthrex website also provides detailed surgical technique information and demonstrations. Or, contact your Arthrex representative for an onsite demonstration.

9. Detailed instructions on the use and limitations of this device should be given to the patient.

10. This is a single use device. Reuse of this device could result in failure of the device to perform as intended and could cause harm to the patient and/or user.

11. **Bioabsorbable only:** Patient sensitivity to the device materials should be considered prior to implantation. See Adverse Effects.

## F. MRI SAFETY INFORMATION

1. **MR CONDITIONAL**  
*Non-clinical testing and in-vitro electromagnetic simulations demonstrated that the metal (tin and stainless steel) Corkscrew, PushLock, and SwiveLock suture anchors are MR Conditional. A patient with this device can be scanned safely in an MR system immediately after placement under the following conditions:*

• Static magnetic field of 1.5-Tesla and 3-Tesla, only

• Maximum spatial gradient magnetic field of 3000 Gauss/cm or less

• Maximum MR system reported, whole body averaged specific absorption rate (SAR) of 2 W/kg for 15 minutes of scanning in the Normal Operating Mode of operation for the MR system

• Under the scan conditions defined, the Corkscrew, PushLock, and SwiveLock suture anchors are expected to produce a maximum temperature rise of up to 1.8 °C after 15-minutes of continuous scanning.

a. **Artifact Information**

*In non-clinical testing, the image artifact caused by the Corkscrew, PushLock, and SwiveLock suture anchors can extend up to approximately 17 mm from this implant when imaged using a gradient echo pulse sequence and a 3-Tesla MR system.*

b. **MR SAFE**

*The Corkscrew, PushLock, and SwiveLock suture anchor devices manufactured from only polyetheretherketone (PEEK) poly (L-Lactide, PLLA), Poly (L-Lactido-co-D-acid, PLDLA), and/or Poly (L-Lactide acid, PLLA) and tri-calcium phosphate (TCP) are MR safe.*

c. **MR INCOMPATIBLE**

*Surgeons must apply their professional judgment when determining the appropriate suture anchor size based on the specific indication, preferred surgical technique, and patient history.*

**Shoulder:** Rotator cuff Repair, Bankart Repair, SLAP Lesion Repair, Biceps Tenodesis, Acromio-Clavicular Separation Repair, Deltoid Repair, Capsular Shift or Capsulolabral Reconstruction.

**Foot/Ankle:** Lateral Stabilization, Medial Stabilization, Achilles Tendon Repair; Hallux Valgus Reconstruction, Mid-foot Reconstruction, Metatarsal Ligament Repair, Metatarsal Tendon Repair (**except** PushLock Tenodesis anchor) and Bunionectomy (**except** PushLock Tenodesis anchor, 2.4 mm and 2.5 mm PushLocks, DX SwiveLock SL, Nano, Micro and Mini Corkscrew FT suture anchors).

**Arthrex Implant System, Tenodesis Screw Eyelet:** A kit comprised of attachable eyelets, FiberTape® suture and a suture threading device. This Implant System is used in conjunction with Arthrex Tenodesis Screws and a Tenodesis driver for use as a SwiveLock (Tenodesis) suture anchor.

**Arthrex Corkscrew, PushLock, and SwiveLock suture anchors** consist of anchors with an integral or separate eyelet. The PushLock® Tenodesis anchor is a two-piece push-in anchor with either a forged or closed eyelet. They are pre-loaded on a handled inserter. Suture, with or without needles, and a suture threader may also be provided.

The Arthrex Implant System, Tenodesis Screw Eyelet is a kit comprised of attachable eyelets, FiberTape® suture and a suture threading device. This Implant System is used in conjunction with Arthrex Tenodesis Screws and a Tenodesis driver for use as a SwiveLock (Tenodesis) suture anchor.

**Arthrex Corkscrew, PushLock, and SwiveLock suture anchors** consist of anchors with an integral or separate eyelet. The PushLock® Tenodesis anchor is a two-piece push-in anchor with either a forged or closed eyelet. They are pre-loaded on a handled inserter. Suture, with or without needles, and a suture threader may also be provided.

The Arthrex Implant System, Tenodesis Screw Eyelet is a kit comprised of attachable eyelets, FiberTape® suture and a suture threading device. This Implant System is used in conjunction with Arthrex Tenodesis Screws and a Tenodesis driver for use as a SwiveLock (Tenodesis) suture anchor.

**Arthrex Corkscrew, PushLock, and SwiveLock suture anchors** consist of anchors with an integral or separate eyelet. The PushLock® Tenodesis anchor is a two-piece push-in anchor with either a forged or closed eyelet. They are pre-loaded on a handled inserter. Suture, with or without needles, and a suture threader may also be provided.

The Arthrex Implant System, Tenodesis Screw Eyelet is a kit comprised of attachable eyelets, FiberTape® suture and a suture threading device. This Implant System is used in conjunction with Arthrex Tenodesis Screws and a Tenodesis driver for use as a SwiveLock (Tenodesis) suture anchor.

**Arthrex Corkscrew, PushLock, and SwiveLock suture anchors** consist of anchors with an integral or separate eyelet. The PushLock® Tenodesis anchor is a two-piece push-in anchor with either a forged or closed eyelet. They are pre-loaded on a handled inserter. Suture, with or without needles, and a suture threader may also be provided.

passador de sutura. Este sistema de implante é usado juntamente com o Tenodesis Screw da Arthrex e uma chave Tenodesis para uso como uma âncora de sutura Swivelock (Tenodesis).

## B. INDICAÇÕES

- Asegúrese de usar la broca recomendada para crear la cavidad ósea.
- Ancas con sutura PushLock y Swivelock solamente:** durante la inserción del ancla, asegúrese de que el ángulo de inserción sea coaxial con el de la cavidad ósea previamente preparada.
- Ancas con sutura PushLock y Swivelock solamente:** introduzca el desatornillador en la cavidad ósea hasta que el cuerpo del ancla entre en contacto con el hueso. Mire y ajuste la tensión de la sutura en caso de ser necesario. La tensión no aumentará durante el avance final del ancla.
- Ancas con sutura PushLock y Swivelock solamente:** asegúrese de que el cuerpo del ancla esté plenamente en contacto con el hueso antes de avanzar el cuerpo del ancla hacia la cavidad ósea previamente preparada.
- Ancas con sutura autoperforantes solamente:** la inserción en hueso muy duro podría requerir la perforación previa de una cavidad ósea para evitar daño al implante.
- Ancas con sutura autoperforantes PushLock y Swivelock solamente:** asegúrese de que el ángulo de inserción del ancla sea perpendicular al hueso.
- Sistema de implante de tornillos con agujas para tenodesis y ancás para tenodesis PushLock solamente:** al insertar el dispositivo, es posible que el extremo proximal del implante sobresalgua más allá del hueso cortical, lo que podría provocar la irritación de las partes blandas o dolor posquirúrgico.
- Sistema de implante de tornillos con agujas para tenodesis solamente:** asegúrese de que el mástil del ojal esté correctamente enganchado en el extremo del desatornillador para tenodesis y sujetó en su lugar al tensionar la FiberTape hacia el mango del desatornillador antes de la inserción en la cavidad ósea preparada.

## H. ENVASE Y ETIQUETADO

- Solo deberá aceptar aquellos dispositivos de Arthrex cuyo envase y etiquetado de fábrica estén intactos.
- Póngase en contacto con el centro de Atención al cliente si el envase está abierto o manipulado.
- Encontrar todos los símbolos que figuran en la etiqueta junto con el título, la descripción y el número de designación estándar en nuestro sitio web, al que podrá acceder a través de [www.artrex.com/symbolsglossary](http://www.artrex.com/symbolsglossary).

## I. ESTERILIZACIÓN

- Este producto se suministra estéril. Consulte el etiquetado del envase para conocer el método de esterilización.

Determinados instrumentos de Arthrex que podrían utilizarse durante la intervención se suministran sin esterilizar y deben limpiarse y esterilizarse correctamente antes de utilizar o reutilizarse. Consulte los documentos DUF-0023-XX y ANSI/AAMI ST79, "Comprehensive Guide to Steam Sterilization and Sterility Assurance in Health Care Facilities", para obtener información específica.

## J. CARACTERÍSTICAS DE LOS MATERIALES

Consulte la etiqueta del envase para conocer los materiales.

Estos dispositivos tienen uno o dos componentes. Cada componente está fabricado con aluminio, poliétertereterona (PEEK), polímero (ácido L-áctico, PLLA), polímero (ácido L-áctido-co-D, PLDLA) o polímero (ácido L-áctico, PLLA) y trifosfato de calcio (TCP).

## K. CONDICIONES DE CONSERVACIÓN

Los dispositivos bioabsorbíveis devén conservarse en el envase original cerrado, en un lugar seco y a una temperatura máxima de 32 °C (90 °F). Además, no deben usarse tras la fecha de caducidad.

Los dispositivos no bioabsorbíveis deben conservarse en el envase original cerrado y lejos de cualquier fuente de humedad. Además, no deben usarse tras la fecha de caducidad.

## L. INFORMACIÓN

Se recomienda que los cirujanos revisen la técnica quirúrgica específica del producto antes de proceder con la intervención. Arthrex suministra técnicas quirúrgicas detalladas en formato impreso, en video y en formatos electrónicos. En el sitio web de Arthrex encontrará también información detallada y demostraciones de técnicas quirúrgicas. Asimismo, podrá solicitar al representante local de Arthrex una demostración en su centro.

## A. DESCRIÇÃO DO DISPOSITIVO

As âncoras de sutura Corkscrew®, PushLock® e Swivelock® da Arthrex consistem em âncoras com um ilhô integrado ou separado. A âncora PushLock® Tenodesis é uma âncora de encaxe de duas peças com um ilhô bifurcado ou fechado. Elas são fornecidas pré-carregadas em um inssor. Fios de sutura, com ou sem agulha, e um passador de sutura também podem ser fornecidos.

O sistema de implante Arthrex, ilhós Tenodesis Screw, é um kit composto de ilhós acopláveis, sutura FiberTape® e um dispositivo

- Apenas bioabsorvível:** A sensibilidade do paciente ao material do dispositivo deve ser levada em consideração antes do implante. Ver efeitos adversos.

## F. INFORMAÇÕES DE SEGURANÇA PARA RM

### 1. CONDIÇÕES PARA RM

Testes não clínicos e simulações electromagnéticas *in-vivo* demonstram que as âncoras de sutura metálicas (titânio e aço inoxidável) Corkscrew, PushLock e Swivelock impõem condições para RM. Um paciente com este dispositivo pode ser escaneado com segurança em um sistema de RM imediatamente após a colocação sob as seguintes condições:

- Campo magnético estático de 1,5 Tesla e 3 Tesla, apens

Camp magnético de gradiente espacial máximo de 3000 Gauss/cm ou menos

- Sistema máximo de RM relatado, taxa de absorção específica médica de corpo inteiro (SAR) de 2 W/kg por 15 minutos de varredura no modo de operação normal do sistema de RM

Sob as condições de digitalização definidas, espera-se que as âncoras de sutura Corkscrew, Pushlock e Swivelock produzam um aumento máximo de temperatura de 1,8 °C após 15 minutos de varredura contínua

### a. Informações do artefato

*Em testes não clínicos, o artefato de imagem causado pelas âncoras de sutura Corkscrew, Pushlock e Swivelock pode estender-se a aproximadamente 17 mm desde implante quando fotografado usando uma sequência de pulsos de gradiente de eco e um sistema de RM de 3 Tesla.*

### II. SEGURADO PARA RM

As âncoras de sutura Corkscrew, PushLock e Swivelock fabricadas apenas a partir de polímero (éter-éster-cetona) (PEEK), polímero (L-ácido) (PLLA), polímero (L-ácido lático) (PLDLA) e/ou polímero (L-ácido lático) (PLLA) e fosfato tricálico (TCP) são seguras para RM.

### G. PRECAUÇÕES

Os cirurgiões devem revisar a técnica cirúrgica específica para o procedimento antes de realizar a cirurgia. A Arthrex oferece técnicas cirúrgicas detalhadas de forma impressa, em vídeo e formatos eletrônicos. O site da Arthrex também oferece informações detalhadas e demonstrações de técnicas cirúrgicas. Alternativamente, entre em contato com o representante da Arthrex para uma demonstração presencial.

### H. ENVASE E ETIQUETADO

- Solo deberá aceptar aquellos dispositivos de Arthrex cuyo envase y etiquetado de fábrica estén intactos.

2. Póngase en contacto con el centro de Atención al cliente si el envase está abierto o manipulado.

3. Encontrar todos los símbolos que figuran en la etiqueta junto con el título, la descripción y el número de designación estándar en nuestro sitio web, al que podrá acceder a través de [www.artrex.com/symbolsglossary](http://www.artrex.com/symbolsglossary).

### I. ESTERILIZACIÓN

### C. CONTRAINDICAÇÕES

- Quantidade ou qualidade insuficiente de osso.
- Suprimento sanguíneo limitado e infecções anteriores, que podem retardar a cicatrização.

Sensibilidade a corpos estranhos. Se houver suspeita de sensibilidade ao material, devem ser feitos os exames apropriados e a sensibilidade deve ser descartada antes do implante.

### D. ANECA'S DE SUTURA PushLock e Swivelock

**Apenas âncoras de sutura PushLock e Swivelock:** Durante a inserção da âncora, certifique-se de que o ângulo de inserção seja coaxial com a cavidade óssea previamente preparada.

### E. ANECA'S DE SUTURA PushLock e Swivelock

**Apenas âncoras de sutura PushLock e Swivelock:** Insira a chave de sutura PushLock e Swivelock, com o dedo, na cavidade óssea.

**Cotovelo:** Reconstrução do tendão do bíceps, reconstrução do ligamento colateral ulnar ou radial, reparo de epicondilete lateral (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Quadril (apenas dispositivos com FiberWire):** Reparo do labrum acetabular (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Pied/Chéville:** Stabilização lateral, reparação do tendão d'Achille, reconstrução do tendão d'Achille, reparação de tendões crucianos, reparação do tendão d'Achille, reparação de tendões crucianos, reparação do tendão d'Achille, reparação de tendões crucianos.

**Tornozelo:** Reconstrução do tendão do bíceps, reparação do ligamento colateral ulnar ou radial, reparo de epicondilete lateral (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Joelho:** Reparo do ligamento cruzado anterior (exceto âncoras de sutura PushLock, Swivelock, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT), reparo do ligamento colateral medial, reparo do ligamento do carpo, reparo de tendões flexores e extensores nas articulações IFF, IFD e MCF para todos os dedos e transferências de tendões digitais.

**Apenas âncoras de sutura PushLock e Swivelock:** Insira a chave de sutura PushLock e Swivelock, com o dedo, na cavidade óssea.

**Antebraço:** Reconstrução do tendão do bíceps, reparação do ligamento colateral ulnar ou radial, reparo de epicondilete lateral (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Quadril (apenas dispositivos com FiberWire):** Reparo do labrum acetabular (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Pied/Chéville:** Stabilização lateral, reparação do tendão d'Achille, reparação de tendões crucianos, reparação do tendão d'Achille, reparação de tendões crucianos.

**Tornozelo:** Reconstrução do tendão do bíceps, reparação do ligamento colateral ulnar ou radial, reparo de epicondilete lateral (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Joelho:** Reparo do ligamento cruzado anterior (exceto âncoras de sutura PushLock, Swivelock, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Antebraço:** Reconstrução do tendão do bíceps, reparação do ligamento colateral ulnar ou radial, reparo de epicondilete lateral (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Cotovelo:** Reconstrução do tendão do bíceps, reparação do ligamento colateral ulnar ou radial, reparo de epicondilete lateral (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Tornozelo:** Reconstrução do tendão do bíceps, reparação do ligamento colateral ulnar ou radial, reparo de epicondilete lateral (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Quadril (apenas dispositivos com FiberWire):** Reparo do labrum acetabular (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Pied/Chéville:** Stabilização lateral, reparação do tendão d'Achille, reparação de tendões crucianos, reparação do tendão d'Achille, reparação de tendões crucianos.

**Tornozelo:** Reconstrução do tendão do bíceps, reparação do ligamento colateral ulnar ou radial, reparo de epicondilete lateral (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Joelho:** Reparo do ligamento cruzado anterior (exceto âncoras de sutura PushLock, Swivelock, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Antebraço:** Reconstrução do tendão do bíceps, reparação do ligamento colateral ulnar ou radial, reparo de epicondilete lateral (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Cotovelo:** Reconstrução do tendão do bíceps, reparação do ligamento colateral ulnar ou radial, reparo de epicondilete lateral (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Tornozelo:** Reconstrução do tendão do bíceps, reparação do ligamento colateral ulnar ou radial, reparo de epicondilete lateral (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Quadril (apenas dispositivos com FiberWire):** Reparo do labrum acetabular (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Pied/Chéville:** Stabilização lateral, reparação do tendão d'Achille, reparação de tendões crucianos, reparação do tendão d'Achille, reparação de tendões crucianos.

**Tornozelo:** Reconstrução do tendão do bíceps, reparação do ligamento colateral ulnar ou radial, reparo de epicondilete lateral (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Joelho:** Reparo do ligamento cruzado anterior (exceto âncoras de sutura PushLock, Swivelock, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Antebraço:** Reconstrução do tendão do bíceps, reparação do ligamento colateral ulnar ou radial, reparo de epicondilete lateral (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Cotovelo:** Reconstrução do tendão do bíceps, reparação do ligamento colateral ulnar ou radial, reparo de epicondilete lateral (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).

**Tornozelo:** Reconstrução do tendão do bíceps, reparação do ligamento colateral ulnar ou radial, reparo de epicondilete lateral (exceto âncoras de sutura PushLock Tenodesis, DX Swivelock SL, Nano, Micro e Mini Corkscrew FT).
