Preparation Guide

Remove package insert, patient labels and Cartiform pouch from box.

Peel back chevron.

Using aseptic technique, transfer jar into sterile field.

Place the sterile jar into a sterile basin.

Using aseptic technique, add sterile saline until volume is just below the lid. Incubate for ~7 minutes until no ice crystals are visible. **Temperature of thawing solution should not exceed 39°C (102°F). Do not thaw for longer than 30 minutes.**

Take the thawed Cartiform jar from the basin and unscrew the lid.

Using sterile forceps, remove Cartiform from the jar and place in a sterile rinse basin at room temperature containing sterile saline for 1 minute. It can be kept in sterile saline for up to 2 hours at room temperature prior to implantation.

Once rinsed, Cartiform is ready to use. The side with the score mark is the bottom of the graft.

**NOTE:** Graft color may vary as human articular cartilage color varies.
