

SOS™ Global Registry Workflow

01

Engage the Patient

- Engage patients on the benefits of completing patient-reported outcome surveys using the SOS™ global registry
- SOS global registry allows the clinical staff to remotely monitor patients' outcomes
- SOS patient education materials are available to support the discussion

02

Enroll the Patient

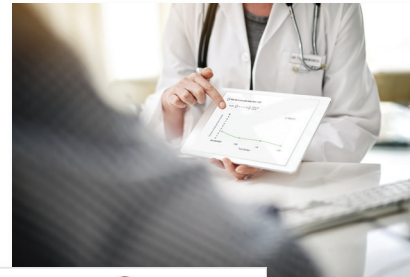

- SOS global registry facilitates surgical and nonoperative patient enrollment with functionality and flexibility for private practices and large facilities with multiple locations
- Manual patient enrollment
 - Data import functionality
 - EMR integration

03

Connect with Patients

- Brand patient emails with customized headers, headshot, facility logo, and office contact information to enhance connection
- Send patient outcome surveys, which can be launched on an in-clinic tablet, via email and text
- Automatic reminders sent from SOS global registry to the patient
- Use Patient-friendly PROM reports to facilitate in-clinic discussions about patient satisfaction

Your 2 weeks Survey is Available

[Take Survey](#)

Dear Patient,
Thank you for completing your outcome survey, which we rely upon to assess your progress. In order for us to optimize your care and understand your progress, please click the button to take the survey. The questionnaire should take you less than one minute to complete.

Through your participation in these surveys, I am able to:

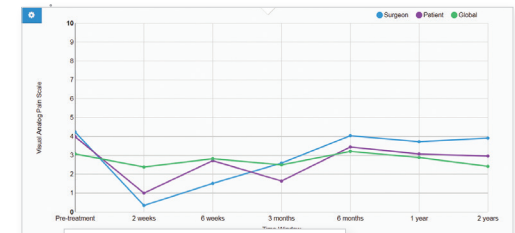

- Monitor your outcomes progress remotely
- Confirm your treatment is successful and meets or exceeds pre-treatment expectations
- Help others with future treatment options
- Potentially streamline and improve your care by understanding exactly your progress to date

Taking these surveys will greatly help me track your recovery and others who have undergone treatments just like yours. We may be sending you additional surveys as we continue to care for you in your recovery.

04

Monitor Patients and Improve Practice

- Clinical staff document the treatment detail, and risk variables
- Preferred templates and/or EMR integration are recommended for quicker documentation
- Clinical staff are able to analyze patient data and any facility or global deidentified data
- SOS global registry facilitates patient compliance and makes it easy to send additional reminders to patients
- Physicians can opt into receiving patient alerts when pain and/or function thresholds have been exceeded

Add a Pain Threshold

Setting a threshold enables alerts to be sent to healthcare providers when the patient reported pain exceeds the threshold. (All fields are required)

- ✓ **Surgeon / Physician**
Dr. Todd Lister
- ✓ **Study Modules**
Knee Arthroscopy
- ✓ **Baseline for Threshold**
Global

Threshold Value (in # of standard deviations above the baseline value)
