Improved Procedure Efficiency and Cost-Effectiveness With Knotless Implant Systems

The SpeedBridge™ implant system provides all implants, sutures, and instruments required to complete a SpeedBridge rotator cuff or Achilles repair in a single sterile tray that maximizes OR efficiency.

Reduce operative time by an average of 20% with Knotless SpeedBridge repair.3

Shoulder/Elbow Implant System Options
- SwiveLock/Scorpion™ Needle Implant System AR-2324BCCS
- BioComposite SwiveLock C Implant System AR-2600SBS-4
- BioComposite SwiveLock SP Implant System AR-2600SBS-5
- PEEK SwiveLock C Implant System AR-2600SBS-6
- PEEK SwiveLock SP Implant System AR-2600SBS-7

Elbow UCL Internal Brace™ Ligament Augmentation Implant System AR-7715

Knee Implant System Options
- MPFL With Interference Screw Implant System AR-1360C-CP
- MPFL With TightRope® Implant System AR-1360CST-CP
- ALL Reconstruction System AR-5522
- ACL Backup Fixation System AR-1593

MCL Internal Brace Ligament Augmentation System AR-5511-CP

Distal Extremities Implant System Options
- Internal Brace Ligament Augmentation With Collagen-Coated FiberTape® Sutures AR-1688-CP
- BioComposite Achilles SpeedBridge Repair With JumpStart® Dressing AR-8928BCJ-CP
- Achilles Midsubstance SpeedBridge Implant System AR-8929BC-CP
- Hand/Wrist Internal Brace Ligament Augmentation System AR-8978-CP

Shoulder & Elbow

The Arthrex SpeedBridge™ knotless technique for repair of a rotator cuff tear includes a fully threaded SwiveLock® anchor combined with FiberTape® suture to create a quick and secure construct with no knots and only 2 suture-passing steps. The result is a low-profile, transosseous equivalent “suture bridge” that enhances footprint compression to maximize contact between tendon and bone.

Surgical Outcomes System™ global registry data from more than 800 cases show reduced operative times using the knotless SpeedBridge technique compared to traditional knotted techniques.

Knee

Superior Capsular Reconstruction
