Superior Capsular Reconstruction

More Than 2 Years of Improved Patient Outcomes With ArthroFLEX® Dermal Allograft

“ArthroFLEX graft integrity at 1 year was demonstrated in a 67-year-old patient following a traumatic dislocation with anterior glenohumeral joint instability.”
—Julie Bishop, MD

Before

After

Intact Glenoid Fixation
Graft Remains Under Tension

Intact Tuberosity Fixation
FiberTape® Suture Synovialization
Graft Vascularization

Biomechanical Restoration
One-year postoperative radiograph demonstrates centering of the humeral head following superior capsule reconstruction with dermal allograft.

Explanted ArthroFLEX SCR Graft at 1 Year Post-SCR
Abundant blood vessel formation assists with incorporation

Tendon-like structures show acceptance and incorporation of material
