2.5 mm PushLock®
KNOTLESS SUTURE ANCHOR

Smaller, Stronger and Knotless...
THE Solution for Hand and Wrist Tissue-to-Bone Repair

UCL Repair
SL Repair
TFCC Repair
The 2.5 mm PushLock Suture Anchor provides a secure means of knotless fixation in the hand and wrist, as well as in foot and ankle applications. Accommodating two strands of either size 0 or 2-0 FiberWire, this two-piece anchor enables a no-profile repair that is quick and straightforward.

The 2.5 mm PushLock uses a PEEK eyelet to place the sutures at the bottom of a drill hole, allowing the surgeon to precisely tension and lock the sutures in place by impacting the tak portion of the anchor. Both the high strength radiolucent PEEK and the absorbable PLLA 2.5 mm PushLock optimize tissue tension and fixation, without knot tying.
